ABOUT

Have you ever watched a movie and thought: „Hey, how on earth did they do this!?”

AHHAA's brand new exhibition (created in 2016) takes you literally behind the scenes. Numerous hands-on exhibits show you how the special effects that you see on the screen are created.

Here, in this film studio, you can become a cinematographer, create your own stop motion animation, dub the videos or jump through walls, like a real stuntman.

This „city” was built of more than 1 km of metal rails, over 70 windows, a solid 60 m³ of styrofoam and a studio-ful of real filmmaking gear.

Surely, after visiting this exhibition, you'll look at the movies in an entirely different way!
